

Mobile Application for Scheduling Consultations

Author: Martin Hanák
Supervisor: prof. Ing. Adam Herout, Ph. D.

Abstract

A mobile app for scheduling academic consultations, built with **Flutter** (MVVM) and secured via **OTP** email verification. It replaces outdated systems by giving students easy **booking and cancellation**, while providing instructors with full control over slots, blocks, and rooms. The app communicates with a **dedicated API**.

Technology Stack

For development, I used **Dart, Flutter, Postman and Figma**

Key Features

For Students

- Browse and join consultation rooms by name
- Book or cancel appointment slots with a note
- Choose online or in-person consultation per slot
- Set notifications for slot availability
- Secure login via OTP email verification

For Teacher

- Create consultation rooms with custom access rules
- Create time blocks for multiple dates at once
- Manage individual slots
- Switch online/offline mode per block or slot
- View slot history and list of joined students
- Automatic email notifications sent to students
